1. Secure Chat App:

- Developed a secure real-time chat application using **React (TypeScript)** for the frontend and **Node.js** for the backend.
- Implemented AES encryption to ensure end-to-end message security, encrypting messages on the client-side before transmission and decrypting them upon receipt.
- Utilized **WebSockets** for real-time communication, enabling seamless message exchange.
- Designed a user-friendly interface for sending and receiving encrypted messages
- Code Link https://github.com/imsaurabh1/secure chat app

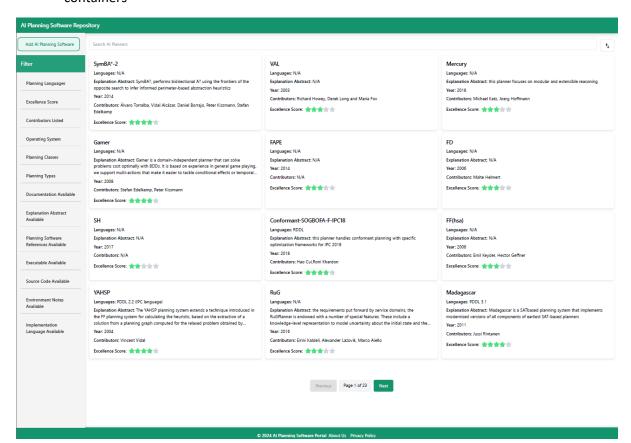

Two client on frontend

Client connected

Backend console shows encrypted message

2. Master Thesis – Al Planning Software Repository

- A centralized platform for accessing AI planning software metadata, with features to discover, filter, sort, and add new software
- Designed with a modular architecture with different functionalities as a service which ensures seamless integration between frontend and backend and an email service for admin notification
- Frontend: React, Backend: Node.js, Database: MySQL, Containerization: Docker with 3 containers

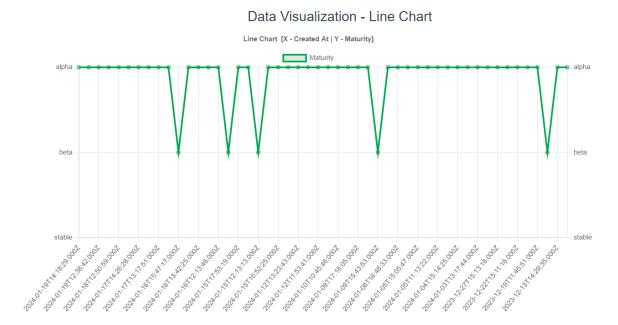

Frontend Home screen

Feature level performance

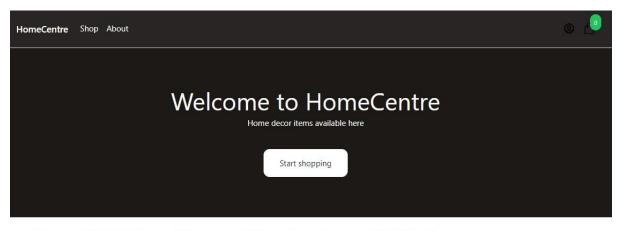

3. Vue Dashboard

- Designed a dashboard using Vue.js to fetch data via GraphQL.
- Created visualizations for complex data using Single Line and Multi-Line Graphs for better insights.
- Integrated backend APIs to fetch the latest records with filters and authorization.
- Code Link https://github.com/imsaurabh1/vue-api graphql

4. HomeCenter Project

- An e-commerce website to buy sofa and bed
- Functionalities: Login, Signup, Product Display, Adding and Removing from the Cart, Checkout, Payment, and Review.
- Technology: Python Django
- Code Link https://github.com/imsaurabh1/homecentre

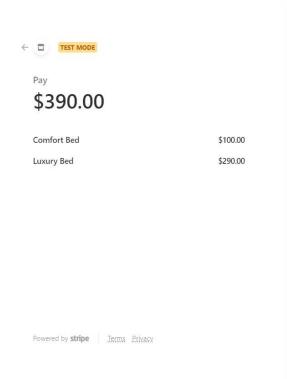

Luxury Bed 290.0

Comfort Bed 100.0

`
ormation for 1-click checkout nd thousands of others.

5. Restaurant Website Project

- Restaurant website with Home, About and Contact Page. Reserve Table & Login Popup Functionality
- Website is developed using ReactJS. This project is entirely developed by me and available on my GitHub.
- Code Link https://github.com/imsaurabh1/asilo
- Live Link https://imsaurabh1.github.io/asilo/

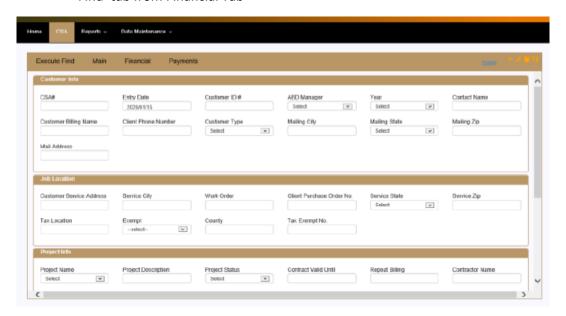

6. To Do App

- Mini Project; same as the name says app to add items to our daily to-do list
- Functionality Add, Delete, Modify
- This app is entirely developed by me and available on my GitHub
- Code Link https://github.com/imsaurabh1/To-Do-App-Code
- Live Link https://imsaurabh1.github.io/To-Do-App/

7. Business Website for client

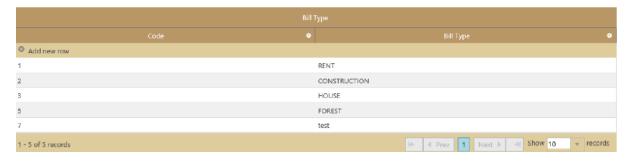

- This Business website was developer for one of the clients which had following three tabs – a) Financial, b) Reports and c) Maintenance
- Website was developed using HTML / CSS & Bootstrap Framework
- Hierarchical Grid used in Reports tab is created using Infragistics
- I was into UI development of Reports and Maintenance tab completely and 'Execute Find' tab from Financial Tab

[(a)Financial]

[(b)Report]

[(c)Maintenance]

8. Bachelors Project – Globe Trotter – An Optimal Travel Sequence Generator

- This website finds the best itinerary/route for a customer given location, cost and duration
- Website is developed using PHP and CSS
- I was into UI development of the website & Ant Colony Optimisation Code Implementation
- File '4.Final_Year_Project_Demo_Video.mp4' has the demo of the website
- https://drive.google.com/drive/folders/1oYgTGGq1RYQRF3P9hFG4zZo Gc4J98h

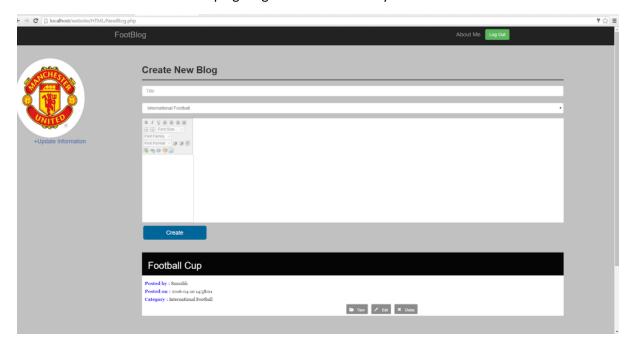

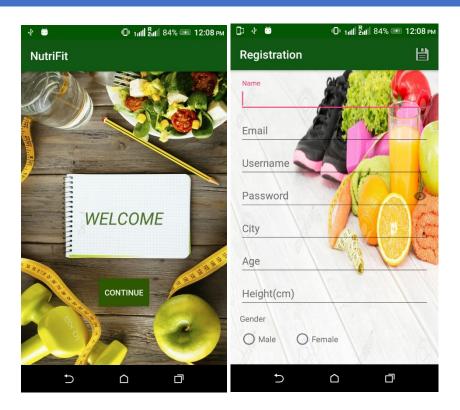

9. Mini Project - FootBlog

- This was a mini project for posting football viewers reactions/comment on the blog
- Website was developed using HTML5, CSS3 & PHP
- I was into developing blog UI and functionality

10. NutriFit App

- Calculates BMI, compares it with standard values, and provides tailored fitness tips
- Allows users to select diets based on preferences and displays detailed nutritional information (e.g., calories, fats, proteins)
- Database: SQLite | API: Nutritionix API

11. Digital Company Match (Fraunhofer IAO)

- Users can register, log in, swipe through company cards, and rate or comment based on individual criteria.
- Two roles are supported: **User** and **Admin**, each with distinct functionalities.
- Successfully implemented the comment functionality, zip file generation, and download feature for admins.
- Backend: Java Frontend: Flutter

12. Music e-store

- A site purchasing music online and transaction management
- Registration, Login, Customer Purchase, Supplier Music Addition
- Technology: Java Swing and MySQL
